EDUCATION AND TRAINING OF WOMEN

1. There is wide consensus that education and training for girls and women, in particular, provides high social and economic returns and is a precondition for the empowerment of women. Education should be aimed at raising and promoting awareness of the rights of women as human rights. Governments, national, regional and international bodies, bilateral and multilateral donors and civil society, including non-governmental organizations, should continue to make special efforts to reduce the female illiteracy rate to at least half its 1990 level, with emphasis on rural, migrant and refugee women, internally displaced women and women with disabilities, in keeping with the Beijing Platform for Action.

2. Governments and all other actors should make special efforts to achieve the benchmarks set in the Platform for Action of universal access to basic education and completion of primary education by at least 80 per cent of primary school-age children by the year 2000; close the gender gap in primary- and secondary-school education by the year 2005; provide universal primary education in all countries before the year 2015; and consider providing multilateral and bilateral assistance.

3. Governments that have not yet done so should formulate national strategies and action plans for implementation of the Platform for Action that indicate how relevant institutions coordinate action to meet the goals and targets for education. The strategies should be comprehensive, have time-bound targets and benchmarks for monitoring, and include proposals for allocating or reallocating resources for implementation. Mobilization of additional funds from all sources to enable girls and women, as well as boys and men, on an equal basis, to complete their education, may also be necessary.

4. Donor Governments should strive to meet the agreed target of 0.7 per cent of gross national product for overall official development assistance as soon as possible; and interested developed and developing country partners, having agreed on a mutual commitment to allocate, on average, 20 per cent of official development assistance and 20 per cent of the national budget to basic social programmes, should take into account a gender perspective.

5. Governments and other actors should promote an active and visible policy of mainstreaming a gender perspective into all policies and programmes, addressing, inter alia, unequal access to educational opportunities and inadequate educational opportunities, and taking into account girls and women in especially difficult circumstances. The education, training and lifelong learning of women should be mainstreamed in policies at all levels, in equal opportunity policies and in national human development plans, where they exist. National machinery for the advancement of women and policy makers in Government, employers’ organizations, labour unions, non-governmental organizations and the private sector should collaborate to ensure that all policies are responsive to gender concerns and that women and their organizations participate in the policy-making process.

6. Integrated policy-making must highlight the interlinkage between education and training policies, on the one hand, and labour market policies, on the other hand, with an emphasis on the employment and employability of women. In order to enhance the employability of women, basic education and vocational qualifications, in particular in the fields of science and technology, are of great importance. In view of the high presence of women in flexible work-time schemes and atypical work, it is particularly important to facilitate women’s participation in “on-the-job training” so that they can secure their jobs and promote their careers.

7. Consciousness should be raised about the need for a new allocation of responsibilities within the family, in order to alleviate the extra burden on women.

8. National statistical offices, responsible governmental ministries, research institutions, women’s groups, employers and workers’ organizations should provide women, government, policy makers and training providers with the best available labour market information. A redesigned, relevant and up-to-date system of labour market information should provide data disaggregated by sex on
training, including employer-sponsored training, present employment trends, income and future employment opportunities.

9. Adult education and training programmes should be developed with a wide focus, incorporating not only literacy and numeracy but also lifelong learning skills and improved capabilities for generating income. Measures should be taken to remove barriers to the participation of women in adult education programmes, such as setting up care structures for children and other dependants.

10. Women who wish to start or improve a microenterprise or small business should have access, not only to financial support services, but also to skills-based training to assist them in the successful management of their business.

11. Governments should meet their responsibilities for providing education and training. Government policies should ensure that different actors in the field of education and training provide and promote equal opportunities for women and men. Governments should promote cooperation among the public and private sectors, including non governmental organizations, labour unions, employers’ organizations and cooperatives, to make the process of training relevant, efficient and effective. Citizens should help to mobilize governmental and non governmental efforts, benefiting from the important role that the media can play, to achieve gender equality in education, training and employment. Employers’ and workers’ organizations should play a critical role in the provision of professional training at the national and local levels. Governments should be ultimately responsible for developing strategies that ensure women’s participation in the provision of education and training, especially for women in remote areas or with social, economic, cultural and physical constraints.

12. Educational planners and policy makers, Governments and other actors should develop programmes in education, technical training and lifelong learning that recognize these components as integral parts on a continuum. This implies that knowledge and skills acquired in formal as well as non-formal, out-of-school education, community activities and traditional knowledge are valued and recognized. The programmes should take a holistic approach, ensuring that women enjoy equality throughout the process in a new learning culture involving individuals, enterprises, organizations and society at large.

13. Educational planners and policy makers should give renewed importance to education in mathematics, science and technology for girls and women. In order to develop the skills required, women need to have full access to education in science and technology at all levels, including the use of modern technologies such as information technology, to vocational training and to lifelong learning. Using a wide range of strategies and modalities, efforts should be made - for instance, through the development of information services and professional guidance for girls and women - to promote girls’ and women’s participation in fields where they are under-represented, such as science, engineering and technology, and to encourage them to participate actively in the development of new technologies, from design to application, monitoring and evaluation.

14. The development of gender-sensitive teaching materials, classroom practices and curricula and of awareness-raising and regular gender training for teachers is a prerequisite for breaking down gender stereotypes and developing non discriminatory education and training aimed at the physical and intellectual development of girls and boys. Teacher training is an essential component in the transmission of gender-sensitive programmes for eliminating the differential behavioural expectations of girls and boys that reinforce the division of labour by gender. Techniques for improving teachers’ capabilities to deliver gender-sensitive instruction need to be researched and widely disseminated in order to support the development of multicultural, gender-sensitive curricula in all areas of instruction.

15. The recruitment, training, working conditions and the status of teachers, in particular, of women teachers, must be improved, and gender-sensitive training for teachers, teacher trainers, school administrators and planners must be developed. Positive action programmes should be stimulated in order to overcome the under-representation of women in educational management.
16. The use of instruments available to ensure equality in education and training should be promoted - instruments such as research, information campaigns, refresher courses for teachers, development of gender-sensitive teaching materials, positive action measures and gender-impact assessments. They focus on a variety of actors: girls and boys, parents, teachers, school administrators and policy makers.

17. Governments should provide increased access to non-discriminatory education and training and create safe, enabling environments in order to retain girls and women in schools and eliminate gender disparities in school attendance at all levels of education, including the higher levels. Safety in schools and during extracurricular activities should be promoted by school authorities, parents and administrative personnel. All actors should join efforts by providing school feeding programmes, transport and boarding schools, when necessary. The contribution of non-governmental organizations to all fields of education and, in particular, to lifelong learning is of importance.

18. Governments and all actors should recognize the need for and provide gender-sensitive early childhood education, especially to those groups under difficult circumstances, and should assure the lifelong learning of quality education for the girl child.

19. Governments and all social actors should promote non-formal education programmes and information campaigns to encourage adult women's lifelong learning.

20. The bodies and specialized agencies of the United Nations system, within their existing mandates, should compile and disseminate information on best practices or strategies for retaining women and girls at all levels of education.

21. Women's studies should be supported and their curricula and research should be shared among educational institutions and women's organizations to provide role models, publicize women's contributions to their societies' advancement, and develop a foundation for gender-equality education and training.

22. The Secretary-General, taking into account his overall responsibility for mainstreaming a gender perspective, should continue to analyse and widely disseminate to Governments and non-governmental organizations, through Women 2000 and other publications in the official United Nations languages, information on the education and training of women and girls as part of the follow-up to the Fourth World Conference on Women. ■
